The First in Okamoto's History!
"OKAMOTO THE GOLD" Launches in Japan
The first natural rubber latex condom from Okamoto to achieve a uniform ultra-thin 0.02 mm thickness range, offering exceptional softness, thinness, and lubrication

Okamoto Industries, Inc. (Head Office: Bunkyo-ku, Tokyo; President and Representative Director: Kunihiko Okamoto) has begun shipments and launched sales in the Japanese market of "OKAMOTO THE GOLD", the first natural rubber latex condom in the company's history to achieve a uniform ultra-thin thickness in the 0.02 mm range. Shipments commenced on September 14.

"OKAMOTO THE GOLD" is currently available only in Japan.

"OKAMOTO THE GOLD (4-Pack)"

"OKAMOTO THE GOLD (8-Pack)"

Key Features

Soft and Flexible: The natural rubber latex material provides exceptional softness and flexibility for a more natural fit.

Ultra-Thin: The first natural rubber latex condom in Okamoto's history to achieve a consistently uniform thickness in the 0.02 mm range under current specifications.

Enhanced Lubrication: Coated with a generous amount of hyaluronic acid-enriched lubricant, utilizing the largest quantity ever applied by Okamoto and approximately seven times more than conventional products.

"OKAMOTO THE GOLD" is a new product developed to provide a natural, barely noticeable wearing experience. Until now, a uniform thickness in the 0.03 mm range had been considered the technological limit for natural rubber latex condoms. Through a technological breakthrough, Okamoto has now achieved a consistently uniform thickness in the 0.02 mm range, the first such achievement for a natural rubber latex condom.

In addition, while maintaining the distinctive softness of natural rubber latex, the product offers enhanced flexibility for an even more natural fit. Furthermore, the lubricant contains a hyaluronic acid-infused gel, applied at approximately seven times the volume used in Okamoto's conventional product, Zero Zero Three Standard.
Combining three key features, "softness, thinness, and enhanced lubrication," OKAMOTO THE GOLD delivers an unprecedentedly natural wearing experience and represents a condom designed to minimize awareness during use.

At Okamoto, our corporate purpose is to create everyday value and happiness for people and society through the limitless possibilities of manufacturing. In response to social challenges, including the spread of sexually transmitted infections (STIs) and unintended pregnancies, we leverage our innovative technologies to develop and deliver products that support healthier, safer, and more comfortable lives. Through these efforts, we remain committed to contributing to the well-being of society.
